There's No “Bad Enough” to Start Therapy

Signs you might be ready

- ## NOTES & REFLECTION

Common Myths About Therapy

In reality, therapy is preventive care for your mind, just like a checkup is for your body. Most clients aren't in crisis; they're building resilience before they need it.

Evidence-based therapy is collaborative. Your therapist brings clinical tools; you bring expertise on your own life. Together you build a plan that actually fits.

Many approaches, including CBT and EMDR, are structured and goal-oriented. You and your therapist can define what “better” looks like and check progress along the way.

Which myth, if any, has quietly held you back from starting? What would you say to it now?

FINDING YOUR FIT

Approaches Our Team Offers

MindShift clinicians draw from multiple evidence-based modalities, matched to you rather than the other way around.

- CBT & Psychodynamic Therapy — for anxiety, depression, and relationship patterns.
- EMDR — a well-researched approach for trauma and distressing life events.
- Couples, Family & Group Therapy — for connection, communication, and shared healing.
- Biofeedback — a mind-body approach that helps you see and shift your stress response.
- Teletherapy — full sessions from home or office, anywhere in California.
